**Cat Pumps® Introduces New Plunger Pump Model 3550**

Cat Pumps announces the newest addition to its family of high-pressure plunger pumps: the model 3550. The 3550 is rated to 10 gpm/38 lpm at 6,000 psi/414 bar. The 3550 pump is ideally suited for equipment operating in high-duty cycle applications in remote or mobile applications, such as hydroexcavating, jetting, blasting and hydrostatic testing. It can be direct-driven hydraulically or pulley driven from motor or engine.

Other design features include V-Packings and low-pressure seals that are completely lubricated and cooled, greatly increasing the pump's service life. Hard-chrome plated forged brass inlet/discharge block manifolds offer superior strength and fluid compatibility. Wet-end is easily serviced without entering crankcase. As with all Cat Pumps products and service parts, the 3550 is on-the-shelf ready for immediate shipment.

Founded in 1968, Cat Pumps is a Minneapolis, MN based company with worldwide operations focusing on providing the longest-lasting, most dependable high-pressure pumps and accessories available in the marketplace. With an emphasis on immediate product availability and outstanding customer service, Cat Pumps prides itself on a commitment to quality as the foundation of its ongoing success.
